DETAILED ACTION

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 24 October 2007 has been entered.

Claim Rejections - 35 USC § 103

3. The rejection of claims 29, 30, 33 - 36, and 45 - 50 under 35 U.S.C. 103(a) as being unpatentable over Heinonen '020 in view of Heinonen '586 and Rosenthal is hereby maintained for the reasons of record.

4. The rejection of claim 31 under 35 U.S.C. 103(a) as being unpatentable over Heinonen '020, Heinonen '586, and Rosenthal, as applied to claim 29 above, further in view of Mault is hereby maintained for the reasons of record.

Response to Arguments

5. Applicant's arguments filed 24 October 2007 have been fully considered but they are not persuasive. Applicant describes an embodiment of both Heinonen references that relies upon transmittal and remote processing, and contends that none of the references teach calculating glucose levels locally and within the device. However,

contrary to Applicant's assertion, Heinonen '020 teach such an embodiment. See Heinonen '020, Figures 2 and 3 and the description of column 5, lines 41 - 60. Further, Applicant argues that Rosenthal does not disclose calculating 'the blood glucose level present on "a skin surface of the patient which is placed against the glucose monitoring device" as claimed' and contends that the claim language distinguishes over the transmission arrangement of Rosenthal. Applicant is reminded that although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. It is noted that while Applicant's disclosed invention may relate to calculating blood glucose level "present on" the skin, the claims merely require an element obtaining "blood glucose levels calculated from measurements obtained from a skin surface of the patient which is placed against the glucose monitoring device". Such a limitation encompasses both Applicant's disclosed embodiment and a transmission arrangement, as disclosed by Rosenthal. Note for example, Rosenthal, Figure 2, and column 5, lines 9 - 11 that describes detecting near infrared energy "emerging from the test subject's body part". As the detector arrangement is in contact with the skin of the test subject, the measurement is clearly "obtained from a skin surface of the patient which is placed against" the measuring device as required by the claim. Thus, contrary to Applicant's assertions, the combination teaches or suggests all of the claimed features and the rejection is hereby maintained.

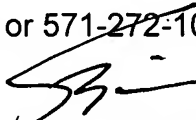

6. With regard to the rejection of claim 31, it is noted that Applicant presents no additional arguments than those discussed above. As such, the rejection of claim 31 is also deemed proper and is also maintained.
